FOREWORD

The Current Employment Statistics (CES) program produces detailed industry estimates of nonfarm **employment, hours, and earnings** of workers on payrolls. CES National Estimates produces data for the nation, and [CES State and Metro Area](#) produces estimates for all 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, and about 450 metropolitan areas and divisions.

Each month, CES surveys approximately 145,000 businesses and government agencies, representing approximately 697,000 individual worksites. The Vermont CES program is operated by VDOL in cooperation with the U.S. Bureau of Labor Statistics.

CES employment is an estimate of the number of nonfarm, payroll jobs in the U.S. economy. Employment is the total number of persons on establishment payrolls employed full- or part-time who received pay (whether they worked or not) for any part of the pay period that includes the 12th day of the month. Temporary and intermittent employees are included, as are any employees who are on paid sick leave, on paid holiday, or who work during only part of the specified pay period. A striking employee who only works a small portion of the survey period, and is paid, would be included as employed under the CES definitions. Persons on the payroll of more than one establishment are counted in each establishment. Data exclude proprietors, self-employed, unpaid family or volunteer workers, farm workers, and household workers. Persons on layoff the entire pay period, on leave without pay, on strike for the entire period, or who have a pending job but have not yet reported for work are not counted as employed. Government employment covers only civilian employees; it excludes uniformed members of the armed services.

TECHNICAL NOTES - 2019

Unadjusted estimates are rounded to 100.

Earnings are gross wages before deductions and exclude certain bonuses and retroactive pay.

Estimates of hours worked include overtime, paid vacations, paid holidays, and paid sick leave.

ANNUAL BENCHMARK REVISION

Monthly CES estimates are revised annually using data from the Quarterly Census of Employment and Wages (QCEW). QCEW is more accurate because it is a census count, but lags CES estimates by six months.

Benchmark revisions are calculated by taking the annual average of both the original estimate and the benchmark and determining the difference. The effect on job counts in 2019 in major categories was as follows:

STATEWIDE (not seasonally adjusted)

Total - All Industries: -0.2%

Total Private -0.6%

BURLINGTON-SOUTH BURLINGTON MetroNECTA (not seasonally adjusted)

Total - All Industries: -0.6%

Total Private: -1.2%

A positive value indicates an upward benchmark revision.

Seasonally adjusted data are rounded to 100. Seasonal factors are now estimated using concurrent seasonal adjustment. <https://www.bls.gov/sae/saeconcurrent.htm>

All data for 2019 are final.
