## ***ECONOMIC – DEMOGRAPHIC PROFILE SERIES***

The 2002 edition contains most of the data previously included in this publication, but in a single publication. County tables still contain detailed town information when available. The narrative is more general and doesn't usually reference specific towns; however, table references should help the reader find the desired information.

The Department of Employment and Training, through its Labor Market Information Section, collected many of the data items used in this series. However, many other state and federal agencies provided valuable information that gives the user a broad picture of Vermont and its local communities. The source for individual tables is acknowledged at the bottom. If you would like to check for additional information, the State of Vermont web page provides links to all state agencies at [www.state.vt.us](http://www.state.vt.us)

Additional labor market information, including links to federal statistical agencies, are available from the LMI web page at [www.vtLmi.info](http://www.vtLmi.info)

Comments or questions about this publication should be directed to:

## ***INTRODUCTION***

Vermont is a mostly rural state that attracts visitors throughout the year to enjoy its natural charm. It is also the home of many well-established businesses, such as International Business Machines and National Life Insurance Company. In recent years, the economic landscape has expanded to include fast-rising companies, such as Ben & Jerry's and Burton Snowboards. Although population growth has been slow in comparison to western states, the 8 percent increase during the 1990s was the second highest in New England. Conditions vary among the state's 14 counties; however, nearly all parts of Vermont struggle with the dilemma of providing good job opportunities, or limiting the impact of economic growth on the environment.

A strong national economy prompted solid job growth in Vermont during most of the last decade. Chittenden County, in the northwestern section, is the foundation for the state's economy and provides nearly one third of the jobs in Vermont. Burlington is the largest city, offering numerous educational and cultural attractions as well as a comprehensive commercial network. Located on the shores of Lake Champlain, the city provides easy access to a wide range of recreational activities. The international airport in South Burlington provides a convenient gateway to distant locations for business or recreation.

Burlington is the core of the state's only Metropolitan Statistical Area, which extends into parts of Franklin and Grand Isle Counties. Addison County also has strong connections to the MSA. The fringes of this region still have strong ties to Vermont's agricultural legacy, which sometimes causes conflict over land use restrictions.

Southern Vermont has also been influenced

by a debate over the trade-off between economic growth and preservation of the rural landscape. Easy access from northeastern urban centers has put pressure on the region for second home development. In addition, resorts along Route 100 have strained to expand and provide self-contained winter recreation facilities. Although job growth was modest during the 1990s, three of the four southern counties have above average income levels. Per capita income for Windsor County was second highest in the state, reflecting the economic strength of the communities near White River. The northern part of Windsor County also benefits from its proximity to Dartmouth College and the Dartmouth Hitchcock Medical Center in nearby New Hampshire.

Bennington County and Windham County have experienced significant turnover in employers. Job growth in Bennington County was higher than average despite the loss of major employers. Windham County, however, was the second slowest county in terms of net job growth. Rutland County had the lowest job growth of Vermont's 14 counties during the 1990s.

While Central Vermont is well known because of the capital city, Montpelier, the region also contains a diversified economy with an impressive cultural heritage. Granite quarries provide stone for monuments and construction all over the world. Workers in granite "sheds" pass on a tradition of craftsmanship that turns the huge slabs into individual monuments and works of art. The granite industry is centered in Barre where Rock of Ages Corporation is one of the leading producers in the industry.

Washington County has a significant manufacturing base with a strong concentration in food products. Well known brands like Cabot and Ben & Jerry's were established in Central Vermont. In neighboring

---

Orange County, however, manufacturing lost jobs during the 1990s due to weakness among nondurable goods producers.

Lamoille County is well known for its two main resorts: Stowe and Smuggler's Notch. The strong connection to recreation activities produces a high concentration of service industry jobs, accounting for 40 percent of the county's jobs in 2000. However, in recent years the county has added to its modest manufacturing sector.

Northeastern Vermont contains some of the most remote areas in the state and it is considered by some to be the most idyllic part of Vermont. The economy is closely connected to its natural resources. Logging and wood products manufacturing provide a significant share of the job opportunities in Essex and Orleans Counties. However, average income levels are generally lowest in these two counties. Caledonia County completes the region known as the Northeast Kingdom and provides a broader array of services and job opportunities.

## ***I POPULATION***

Vermont was the second fastest growing New England state during the 1990s, as population increased by 8 percent according to the 2000 Census. However, nationally, population growth was 13 percent, as some southern states expanded by more than 20 percent, and western states experienced even greater population growth.

In Vermont, the fastest growing county was the smallest in 1990. Grand Isle County's population increased by 30 percent over the ten year span to edge ahead of Essex County. Another relatively small county, Lamoille, experienced a surge in population as the number of residents increased by 18 percent. Both Lamoille and Grand Isle Counties are

strongly influenced by seasonal recreation activities. Lamoille County is home to Mount Mansfield and Madonna Mountain, which offer prime downhill skiing terrain. However, Grand Isle's location along Lake Champlain makes it attractive for summer activities.

Chittenden County, which contains almost one quarter of the Vermont residents, had the fourth highest population growth rate among the state's 14 counties. Population radiated out from the core of the Burlington metropolitan area during the 1990s, producing large increases in surrounding towns in Chittenden County and parts of bordering Franklin County.

Population growth was more modest in southern Vermont. Along the eastern side of the Green Mountains, Windham and Windsor Counties grew by 6 percent. Along the western side bordering New York state, population growth was about half that.

In the Northeast Kingdom, Essex County's population remained almost unchanged over the 10 years. Rural Orleans County, however, expanded by 9 percent.

Population data for individual towns is in tables 2-15.

Population growth during most of the 1990s was concentrated in the age cohort 35-54 years old, reflecting the aging of the baby boom generation. In contrast, the youngest group, 0-4 years, actually declined by 19 percent from 1990 to 2000 in Vermont. Nationally, the youngest group grew by 4 percent. The median age for Vermont was 37.7 years in 2000, more than 2 years older than the national population.

For details by county and age group, see tables 16-19.

Crime statistics based on convictions where prosecuted are shown in table 20. Caledonia

---

County had the highest conviction rate per 100 population, but numerous other counties had similar rates. Orange County had the lowest conviction rate, which was similar to Grand Isle and Addison Counties.

## ***II. ECONOMIC TRENDS***

Vermont experienced solid growth in private industry during the 1990s. By 2000 the number of jobs covered under the state's Unemployment Insurance Program had increased by 18 percent from 10 years earlier. The comparable national growth rate was only 10 percent.

Grand Isle again led the state with a 57 percent increase in private industry jobs during the decade. However, as with population, the base level was very small, so the numerical increase was modest. Grand Isle relies heavily on retail trade and services to provide jobs. There is also a relatively high concentration of jobs in the public sector. Government employment, however, grew relatively slowly in Grand Isle compared to the private sector.

Including Grand Isle, 8 of Vermont's 14 counties exceeded the state's private sector job growth during the 1990s. Franklin and Lamoille Counties ranked below Grand Isle with job growth slightly over 30 percent. Both counties experienced solid growth in manufacturing, especially Lamoille County. Service industry growth was a major factor in Franklin County where lodging and health services provided a substantial increase in jobs. Resorts and lodging showed a modest decline in Lamoille County, but this was more than offset by growth in general recreation services.

The ranking of other counties with above average private sector job growth is: Chittenden, Addison, Bennington, Caledonia,

and Washington. Essex County matched the statewide rate but 5 counties were lower.

Orleans County, with job growth of 13 percent, did the best of the 5 below the statewide rate. Manufacturing is an important component of the economy in Orleans but employment slipped during the 1990s. Construction and government jobs grew faster than the statewide average in the county but more substantial sectors, such as trade and services, grew more slowly.

Windsor, Windham and Orange Counties also experienced slower than average job growth during the 1990s. All 3 counties experienced losses in manufacturing. Rutland County ranked last in job growth at only 6 percent. Significant losses in manufacturing combined with slow growth in other sectors to lower the growth rate.

Unemployment rates ranged from 1.8 percent for Chittenden County in 2000 to 5.9 percent in Orleans County. Unemployment is often influenced by seasonal employment patterns as well as overall economic strength. Chittenden County and Windsor County have a well-diversified economy that keeps unemployment from fluctuating significantly. In contrast, Lamoille and Grand Isle Counties have a substantial number of jobs in seasonal industries, which lay off people for at least part of the year.

See tables 21-34 for details by county.

Farming accounts for less than 2 percent of the Gross State Product for Vermont but it is still an important part of the Vermont economy. Agricultural services are often beneficial to residents not directly involved in large-scale farming and the intangible benefit of "open space" helps tourism, a major contributor to Vermont's economic well-being. Addison and Franklin Counties, in Northwestern Vermont,

---

are the most significant agricultural areas. Orleans County is the third largest contributor to agricultural production in the state. In other counties agriculture is less significant. Dairy farming is the most common type of agriculture, accounting for 85 percent of agricultural sales in Franklin and Orleans Counties (see table 35).

Logging and forestry also are a significant part of the rural economy. Areas such as Essex and Caledonia Counties, which have limited farming, harvest a large volume of timber. Essex County led the state's softwood harvest in 2000, accounting for 19 percent of the total. Orleans County also reported significant logging for softwood. Cutting activity may fluctuate from year-to-year depending on market conditions (see table 36). In addition to logging, the forests provide resources for furniture manufacturing and paper production, especially in northeastern Vermont.

As the center of the state's economy, Chittenden County provides the largest share of tax revenue for the state (see table 37). One third of income taxes are from Chittenden County residents, and almost as large a share of sales & use taxes is generated there. Windsor County ranks second in the percentage of income taxes, but it is slightly less than 10 percent. Rutland County, which is second in population, ranks fourth in income taxes. The recreation and tourist activities, however, generate the second highest volume of revenue through the rooms and meals tax.

### ***III. INCOME AND WAGES***

Average wages vary widely in Vermont due to different industrial concentrations, types of occupations, the mix between seasonal and year-round work, and the extent of union activity. Chittenden County provides many of the highest paying jobs in the state and had

an annual average wage over \$34,000 in 2000. The dominance of this county in the Vermont economy is reflected by the fact that it is the only county where the average wage exceeds the state figure of \$28,920. The second highest county, Washington, is influenced by state government operations.

Counties with relatively low annual wages, such as Grand Isle and Lamoille Counties, may have a significant number of part-time and seasonal jobs. Most areas of the state, however, have a mix of different industries that provide both year-round and seasonal employment, producing higher annual wages (see table 1).

Income levels also vary widely throughout Vermont. Per capita income, reported by place of residence, is highest in Chittenden County. Unlike the wage data, however, five other counties also exceed the statewide level. After Chittenden, the ranking is: Windsor, Bennington, Washington, Windham and Grand Isle. Essex County clearly has the lowest income levels with only 63 percent of the statewide figure. Orleans and Franklin Counties are also among the lowest income areas in the state (see table 1). It should be noted that these are mostly rural areas that have significant concentrations of agriculture and forestry.

Another measure of income is available by town based on the Adjusted Gross Income (AGI) per tax return. Since this data is based on tax returns, it is influenced by the mix of single and dual income households for a town. (Tables 2-15 provide the latest data for each town within the appropriate county.) This data shows that 7 of the top 10 towns by AGI are in Chittenden County. Essex Town tops the list at more than \$46,000; the second place town is Norwich at over \$45,000 in Windsor County. Other town/counties represented in the top 10 are Georgia in Franklin County and Middlesex in Washington County.

---

Poverty rates tend to be highest in the Northeastern Counties, which have the lowest income levels (see table 1). The poverty rate in Orleans County was almost 15 percent, compared to the statewide rate below 10 percent. Chittenden County had the highest income levels and the lowest poverty rate, 7 percent.

#### ***IV. HOUSING***

Housing growth statewide during the 1990s was similar to population with a growth rate of slightly less than 9 percent. Nationally, housing units grew by 13 percent. Approximately 70 percent of the occupied housing units in Vermont were occupied by the owner, leaving about 30 percent for rental purposes. Nationally, 66 percent of the units were owner occupied.

At the local level some unusual growth patterns occurred. Essex County had the highest growth rate in housing, despite the fact its population had the lowest growth rate during the last decade. Growth in seasonal units for recreation purposes probably influenced the expansion. Orleans County, also in the Northeast Kingdom, had the second highest growth rate at 17 percent.

Housing units grew by 13 percent in Chittenden County, Vermont's most populous county. Population grew by 11 percent from 1990 to 2000 but Chittenden County is often regarded as having a housing shortage. This assessment reflects the significant population increase associated with the students at the University of Vermont and other colleges. The percentage of owner occupied housing in Chittenden County is the lowest in the state, partly because of the high concentration of students in the Burlington area who live off-campus.

Southern Vermont housing growth was

generally below the statewide average and was consistent with the relatively low population growth for the region.

In Central Vermont, Lamoille County's housing units grew by about the same as the statewide rate; however, the county's population expanded by almost 18 percent in the 1990s. Housing in Washington and Orange Counties exceeded their population growth by a slight margin (see table 18).

#### ***V. EDUCATION***

The school enrollment pattern is similar to the population distribution with the four northwestern counties accounting for 39 percent of enrollment. Funding for local education is controlled by a complex law known as Act 60 that specifies conditions under which property tax revenue is shared among towns. Despite efforts to "equalize" education, school spending varies widely in different towns.

Tables 39-52 show the latest approved school budgets on a per equalized pupil basis. County data is shown as a convenient summary but all spending is done at the town level. The towns in Windham County averaged almost \$10,500 per pupil and led the state. Four other counties exceeded the statewide average: Windsor, Lamoille, Addison and Orange. The other nine counties spent less than the statewide average of \$9,084 per pupil.

Performance measures such as SAT scores are provided for schools within a county (see tables 39-52).

There are numerous colleges and universities in Vermont. Some of the most well known are the University of Vermont (UVM) in Burlington, Middlebury College, Bennington College, Norwich University (in Northfield), Landmark College (in Putney, for students with various learning disabilities) and many others.

Table 1

## Education Comparison: Vermont Counties

## GLOSSARY

### ADJUSTED GROSS INCOME (AGI)

Adjusted Gross Income (AGI) is the value an individual reports on their state income tax. The Vermont Department of Taxes provides the data reported in this publication.

\* As noted by the Tax Department: This data is provided for historical continuity with previous tax reports. Median AGI for all tax returns is an inappropriate measure of central tendency because it is so dependent on the mix of single and dual incomes within a town.

Determination of median AGI for all tax returns by town was required by VSA Title 16, Section 3480 in 1981 to assist in computation of aid to education. In 1987 this statute section was amended to specify determination of average AGI per exemption. The entire section was repealed in 1997 as part of Act 60.

AGE COHORT is an age grouping that is an aggregate of sequential years of age. For example, one group might be all persons between the ages 5-14.

ANNUAL AVERAGE WAGE is the average wage paid by all firms covered under Vermont's unemployment compensation law. The average wage is computed by dividing the total wages paid during the year by the average employment.

AVERAGE RESIDENTIAL VALUE is the price for a particular class of real property (a dwelling with less than 6 acres) reported by the Department of Property Valuation and Review (PVR). PVR uses the listed values and property counts provided by municipalities which is not comparable to the equalized values reported in previous publications.

COVERED EMPLOYMENT in this publication includes the employment of both public and private employers covered by the unemployment compensation law. The data is gathered from reports submitted by employers each quarter and is aggregated into industries as defined by the 1987 Standard Industrial Classification Manual (SIC). The major groups of employers excluded from coverage are most agricultural production firms and the self-employed.

### EDUCATION

AVERAGE DAILY MEMBERSHIP (ADM) of a school district is the average enrollment of pupils who are legal residents of the district attending public schools, or for whom the district must reimburse the Commissioner of Education.

## Glossary continued (Education).....

**EQUALIZED PUPIL** is a calculated measure as defined in state statute based on Average Daily Membership, and state-placed students, as weighted by factors such as secondary students, students in poverty and students for whom English is not the primary language.

**FUNDING** for education is broken into three parts: 1-spending below the General State Support Grant; 2-the General State Support Grant (\$5,448 per equalized pupil for the 2001-2002 school year); 3-spending above the General State Support Grant, which is also called above block spending. Parts 2 and 3 make up Local Education Spending, which is the spending amount that determines tax rates. The difference between Total Budgeted Education Spending and Local Education Spending is part 1, the spending below the block grant. These revenue sources consist of state categorical grants, surpluses, interest income, and donations that some towns make to their schools.

**EMPLOYMENT** in this publication is measured by Covered Employment and Labor Force. Covered Employment is based upon where the job is located. Labor Force is based upon where the worker resides. See Covered Employment and Labor Force for further information.

**FELONY** is generally any offense whose maximum term of imprisonment is more than two years. A judge can choose a maximum sentence less than two years for a statutory felony.

**HIGH SCHOOL DROP RATE** is the percentage of students who leave high school during the school year and the preceding summer. Enrollment figures used in calculating this rate have been adjusted for transfers and deaths.

**LABOR FORCE** data measures the labor force status of the area's residents who are 16 years of age or older. The residents may work, look for work, or be unemployed from firms in areas other than where they reside. The estimates include agricultural workers, unpaid family members and the self-employed.

**MEDIAN** is a statistical term. Data is put in numeral order. The median is the middle term. Fifty percent of the data fall above the median and fifty percent fall below the median.

**METROPOLITAN AREA** is an urban area that meets specific size criteria - either it has a city of at least 50,000 inhabitants within corporate limits, or it contains an urbanized area of at least 50,000 inhabitants and has a total population of at least 100,000.

Glossary continued.....

MISDEMEANOR is generally any offense whose maximum term of imprisonment is up to two years.

PER CAPITA INCOME data for the state and counties is based upon estimates from the Bureau of Economic Analysis of the U.S. Department of Commerce.

SAT or SCHOLASTIC APTITUDE TEST scores summarize information for high school seniors who took the test. The test is used by colleges as an indicator of how well a student will do in college.

TAX RATE is the effective or "equalized" estimate of what the tax rate would be if all property was appraised at 100% of Fair Market Value.
